PROFESSIONAL SUMMARY

Motivated Computer Science Engineering graduate with strong knowledge of Core Java, OOP, JDBC, Servlets, SQL, and Oracle Database. Hands-on experience in developing Java-based web applications using MVC architecture, CRUD operations, Spring Boot, Spring JDBC, and REST APIs. Familiar with frontend technologies including HTML, CSS, JavaScript, and Bootstrap, along with Python and Machine Learning. Strong problem-solving and programming skills with an interest in software development, automotive technology, AI/ML, and emerging mobility solutions. Eager to contribute to a technology-driven organization and grow as a Software Engineer.

TECHNICAL SKILLS

Languages :	Java (OOP, Exception Handling, Multithreading)
Backend :	JDBC , Java Servlets, MVC Architecture
Spring Framework :	Spring Core(Dependency Injection, Annotations)Spring JDBC, Spring Boot, Hibernate, JPA, Spring MVC, REST APIs, Maven
Frontend :	HTML5, CSS3, JavaScript (Basics) , Bootstrap
Databases :	Oracle Database, SQL (SQL Commands, Joins, Built-in Functions, Clauses, Subqueries, Constraints, SET Operators)
Tools & IDE :	VS Code, Eclipse IDE, EditPlus, Git, GitHub

PROJECTS

IT-MockExams – Online Mock Examination Platform | [IT-MockExams.com](#) | [GitHub](#) 2026

Technologies: Java, Spring Boot, Spring MVC, Spring Data JPA, Hibernate, MySQL, HTML5, CSS3, JavaScript

- Developed a full-stack online examination platform that allows students to take subject-specific mock exams and evaluate their performance.
- Implemented an admin module to create, manage, and activate exams with configurable durations and question counts.
- Developed REST APIs using Spring Boot to manage exams, questions, student authentication, and exam submissions.
- Integrated MySQL with Spring Data JPA and Hibernate for database operations and data management.
- Designed a responsive frontend for student and admin modules using HTML, CSS, and JavaScript.
- Implemented exam timers and functionality to prevent students from retaking the same exam.
- **Deployed the application using Railway.**

Naren School Website | Website: [nAren-school.com](#) | [GitHub](#) 2026

- Developed and deployed a responsive school website using HTML, CSS, and JavaScript with Home, About, Gallery, Admissions, and Contact sections.
- Implemented interactive UI components and client-side functionality using JavaScript.
- Designed a user-friendly, mobile-responsive interface for seamless access across different devices.
- **Deployed the website on Netlify and made it publicly accessible for real-world use by the School.**

Parkinson's Disease Prediction Using Machine Learning | [GitHub](#) 2026

- Early diagnosis of Parkinson's Disease is difficult because traditional methods rely on subjective motor assessments (UPDRS, DaTscan), which often miss subtle non-motor symptoms like voice changes and gait deviations.
- Tech Stack: Python, Scikit-learn, SHAP, Praat libraries, wearable sensor data.
- Outcome: Achieved high accuracy in early PD detection, enabling real-time, interpretable predictions. Designed as a clinical decision-support tool (HIPAA-aligned), improving early intervention and reducing healthcare burden.

EDUCATION

B.Tech in Computer Science & Engineering 2022 – 2026

Malla Reddy Institute of Engineering and Technology • CGPA: 8.23

CERTIFICATIONS

- Java Programming Fundamentals – Infosys Springboard
- Cambridge English Empower – Cambridge University
